CardioScan

EDAN 1201
Quick Guide

STEP 1   Wake/Turn ON

- Press any key to wake device or hold down the POWER 👓 button if the ECG machine is off.

- CHECK the RP (black or red box) has a steady red light, indicating it also has power.

STEP 2   Skin prep and lead placement

- Prep skin and place leads according to your clinic guidelines.

STEP 3   Enter Patient Info

- Press [F1] to open enrolment form

- Enter **Medical Record Number (MRN) aka Patient UR number** and use Tab[to] move to next field to enter all other patient details.

- Tab to **OK** and press [Enter] when finished.

Additional codes

Symbol	Meaning	Placement
#	Urgent	At end of Patient ID

STEP 4   Final check & run test

- Check the **Patient info** and **Time** are correct

- Check leads are connected and trace quality is good

- Press [PRINT/STOP] button to run ECG test

- When done, ECG will print and also transmit to CardioScan for reporting.

[Tab] to move

[⇧ Shift] and **3** for **#**

PRINT/STOP

Enter

Disconnected leads

Troubleshooting

Check connection

- If you see this error message, ensure the white modem and black/red RP devices are plugged in.

- Then press [Enter ⏎] to return to the trace screen.

Clear File manager

- Press [F6] to open new screen

- Press [F1] to open **File Manager**

- Press [F1] to select **TransAll**

- You will see a processing prompt

- Once **File Manager** is clear, press [ESC] to return to the trace screen

- The EDAN is now ready for use again.

Persistent flickering green light

- If you notice the **green light** on the RP (black or red box) device continues to flicker for an extended time after completing an ECG (10+ mins), there is likely a transmission issue.

- Try moving the device to another area in the hospital to pick up a better Wi Fi signal.
